Norsk Data Floppy Disks

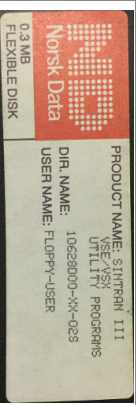

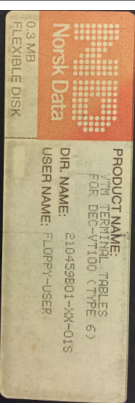

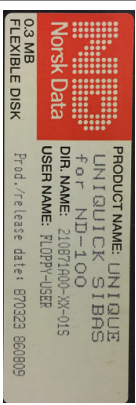

With the ND-10/S system came a number of floppy disks which we now have imaged. The reading of the disk was not an entirely smooth journey. We used both the IMD tool by David Dunfield and then also cw2dmk by Tim Mann.

Many disks had problems and required many retries to read at all. Some had hard errors that was not able to recover from. The disks are provided anyway. If lucky those sectors that are missing is not used anyway.

One general problem seems to be the fact that ND disks are backwards. I.e. the directory is located at track 75. If there are problems with disks is is generally the higher tracks numbers that suffer.

These without a comment in the READ STATUS column were read without any problem.

If you want to download all images in one single tar archive it is available [here](#).
